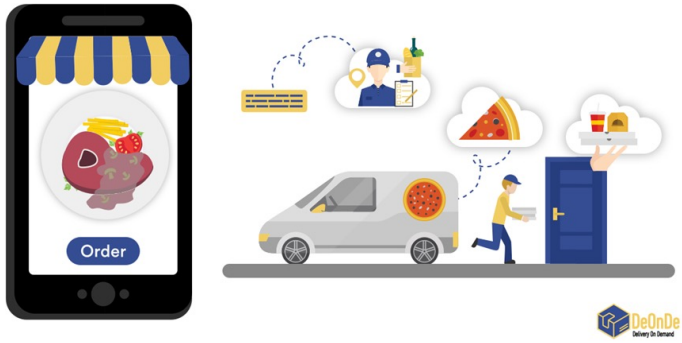
Project name: Online Food ordering system
Subject name:

ABSTRACT

- ONLINE FOOD DELIVERY SYSTEM is a website designed primarily for use in the food delivery industry. This system will allow hotels and restaurants to increase scope of business by reducing the labor cost involved. The system also allows to quickly and easily manage an online menu which customers can browse and use to place orders with just few clicks. Restaurant employees then use these orders through an easy to navigate graphical interface for efficient processing.

Introduction

- Online ordering system that I am proposing here, greatly simplifies the ordering process for both the customer and the restaurant. System presents an interactive and up-to-date menu with all available options in an easy to use manner. Customer can choose one or more items to place an order which will land in the Cart. Customer can view all the order details in the cart before checking out. At the end, customer gets order confirmation details. Once the order is placed it is entered in the database and retrieved in pretty much real time. This allows Restaurant Employees to quickly go through the orders as they are received and process all orders efficiently and effectively with minimal delays and confusion



Objective

- To Develop a system that will allow customers to place their food order online and provide them with feedback as to the calorie and fat count of the meal, a generic image of the meal, a list of side dishes, main course ingredients, and cost information.

Conclusion

- An online food ordering system is proposed which is useful in small family run restaurants as well as in places like college cafeteria, etc.

Thank you!
